1. INTRODUCTION

1.1 Project Overview

Food is a necessity for human life and has been addressed in numerous medical conventions. Modern dietary evaluation and nutrition analysis technologies give consumers more possibilities to explore nutrition patterns, comprehend their daily eating habits, and keep up a balanced diet. Finding out a food's nutritional value is done through nutritional analysis. Information about the chemical make-up, processing, quality assurance, and contamination of food is a crucial component of analytical chemistry.

1.2 Purpose

The primary goal of the project is to develop a model that will be used to categorise fruits according to their various attributes, such as color, shape, and texture. Here, users can take pictures of various fruits, which are subsequently uploaded to a trained algorithm for analysis. The model examines the image to determine the nutrition content of the fruits, such as their sugar, fiber, protein, and calorie content.

2. LITERATURE SURVEY

2.1 Existing Problem

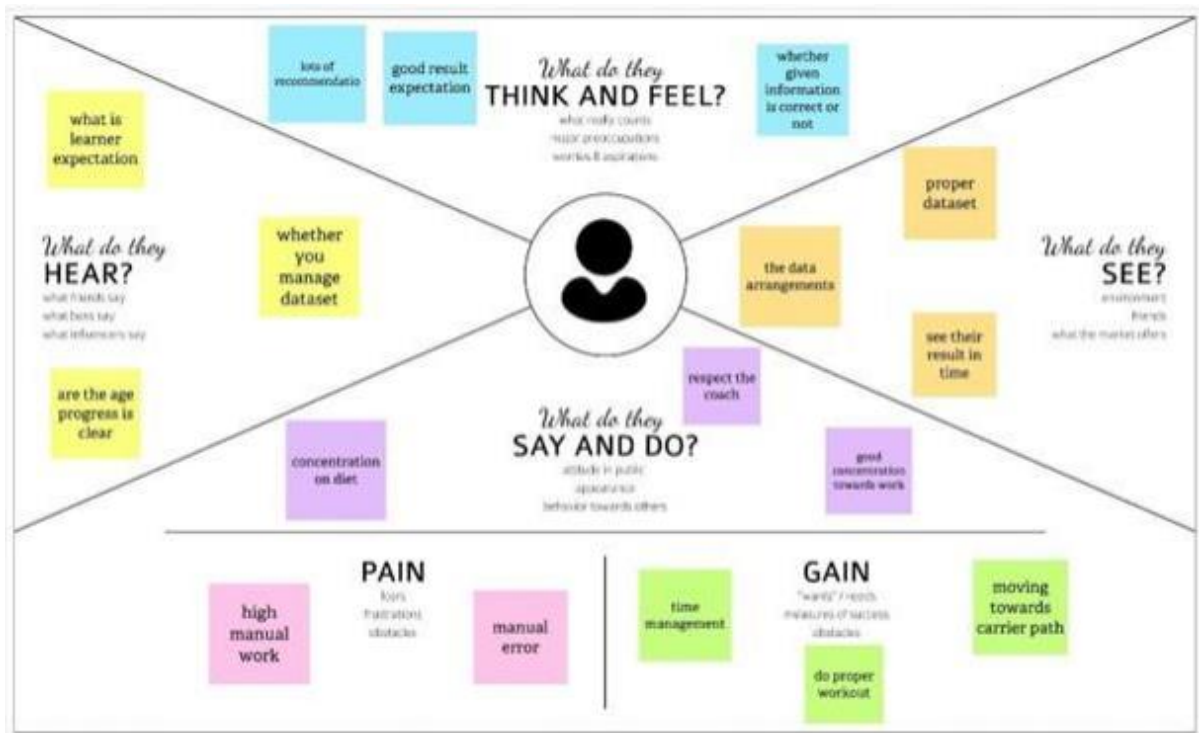

Neutrino offers its users nutrition-based data services and analytics with the goal of becoming a leading platform for the nutrition industry. To enable customized data compilation, the platform uses NLP, mathematical models from optimization theory, and predictive analysis. The software uses artificial intelligence to generate personalized data for a smart calorie counter. Their artificial intelligence picks up on a person's preferences, body type, and taste. An extensive nutrition and exercise tracker has all of this information.

2.2 Problem Statement Definition

The primary goal of the project is to develop a model that will be used to categorise fruits according to their various attributes, such as color, shape, and texture. Here, users can take pictures of various fruits, which are subsequently uploaded to a trained algorithm for analysis. The model examines the image to determine the nutrition content of the fruits, such as their sugar, fiber, protein, and calorie content.

3. IDEATION & PROPOSED SOLUTION

3.1 Empathy Map Canvas

3.2 Ideation & Brainstorming

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

10 minutes to prepare
 1 hour to collaborate
 2-6 people recommended

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

10 minutes

- Team gathering**
Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.
- Set the goal**
Think about the problem you'll be focusing on solving in the brainstorming session.
- Learn how to use the facilitation tools**
Use the Facilitation Superpowers to run a happy and productive session.
[Open article](#) →

1 Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

5 minutes

problem

How might we [your problem statement]?

Key rules of brainstorming

To run an smooth and productive session

- Stay in topic.
- Encourage wild ideas.
- Defer judgment.
- Listen to others.
- Go for volume.
- If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping

3 Brainstorm

Write down any ideas that come to mind that address your problem statement.

10 minutes

Tip
You can add a sticky note and tell the group (don't be afraid) how to start thinking!

ORIGINAL

ORIGINAL

ORIGINAL

ANALYTICAL

SURVEY

5 Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

20 minutes

Step-3: Idea Prioritization

4 Prioritize

You have 10-15 after on the same page about what's important. Now it's time to prioritize. Place your ideas on this grid to determine which ideas are important and which are feasible.

15 minutes

Feasibility

Importance

Number of ideas (1-10) and importance (1-10)

3.3 Proposed Solution

S.NO	PARAMETER	DESCRIPTION
1.	Problem Statement (Problem to be solved)	<ul style="list-style-type: none">• The main aim of the project is to build a model which is used for identifying the fruit depends on the different characteristics like color, shape, texture etc using image processing.• Here the user can capture the images of different fruits and then the image will be analysed with the trained model.• The model analyses the image and lists out the nutrients present in the fruitlike sugar, vitamins, minerals, protein etc
2.	Idea/Solution description	<ul style="list-style-type: none">• The idea of this application is that the user can capture the images of different fruits and vegetables, and then the image will be sent to the trained model.• The model analyses the image and detects the nutrition based on the fruits like (Sugar, Fiber, Protein, Calorie intake, etc.). The above idea is achieved by using the Convolution Neural Network (CNN).• It is used to pick the raw pixels present in the image. Fruit Recognition using Color and Texture Features
3.	Novelty/Uniqueness	<ul style="list-style-type: none">• The application has several unique features. The main feature is that the user need not have to visit or consult a Nutritionist(or) a Dietician to follow a fit and healthy diet.• This application has the feature of analysing the entire nutritional content of fruits and vegetables by simply scanning them. It provides for a personalized dietary requirement for individuals who have limited preferences while choosing food
4.	Social Impact / Customer Satisfaction	<ul style="list-style-type: none">• This will acquire knowledge and provide information about nutrition. Now a days, no one follows the diet plan. Providing this information, they come to know about the nutrition present in each food item.

		<ul style="list-style-type: none"> • It is used to schedule a diet plan by taking the image of a food item and if we send it, we can get information about each food
5.	Business Model (Revenue Model)	<ul style="list-style-type: none"> • Social media is the best way to spread the word about our application and with the help of influencers we can attract normal people. • Clustering and targeting the fitness people with the help of local gyms. Allowing third-party vendors (Nutritional Products) to sell their products through our app via.
6.	Scalability of the Solution	<ul style="list-style-type: none"> • Artificial intelligence (AI) can be used to predict investment outcomes quickly and effectively, as well as to devise strategies or establish long-term goals. Scalable AI pertains to how data models, infrastructures, and algorithms can increase or decrease their complexity, speed, or size at scale in order to best handle the requirements of the situation at hand. • As improvements continue with data storage capacities as well as computing resources, AI models can be created with billions of parameters. Scaling up nutrition is a global push for action and investment to improve maternal, child nutrition and various health problems.

3.4 Problem Solution Fit

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators.

4. REQUIREMENT ANALYSIS

4.1 Functional Requirement

Following are the functional requirements of the proposed solution

FR.NO	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Gmail or using phone number
FR-2	User Confirmation	Confirmation on Gmail or using phone number
FR-3	User Details	Registration through form
FR-4	Server Calculation	Calculating user details Example: Height, Weight, Age
FR-5	Calculate information from Server	Based on the given information they calculate their nutrition level
FR-6	Server notification	Based on the nutrition level server provide notification like intake of food and water

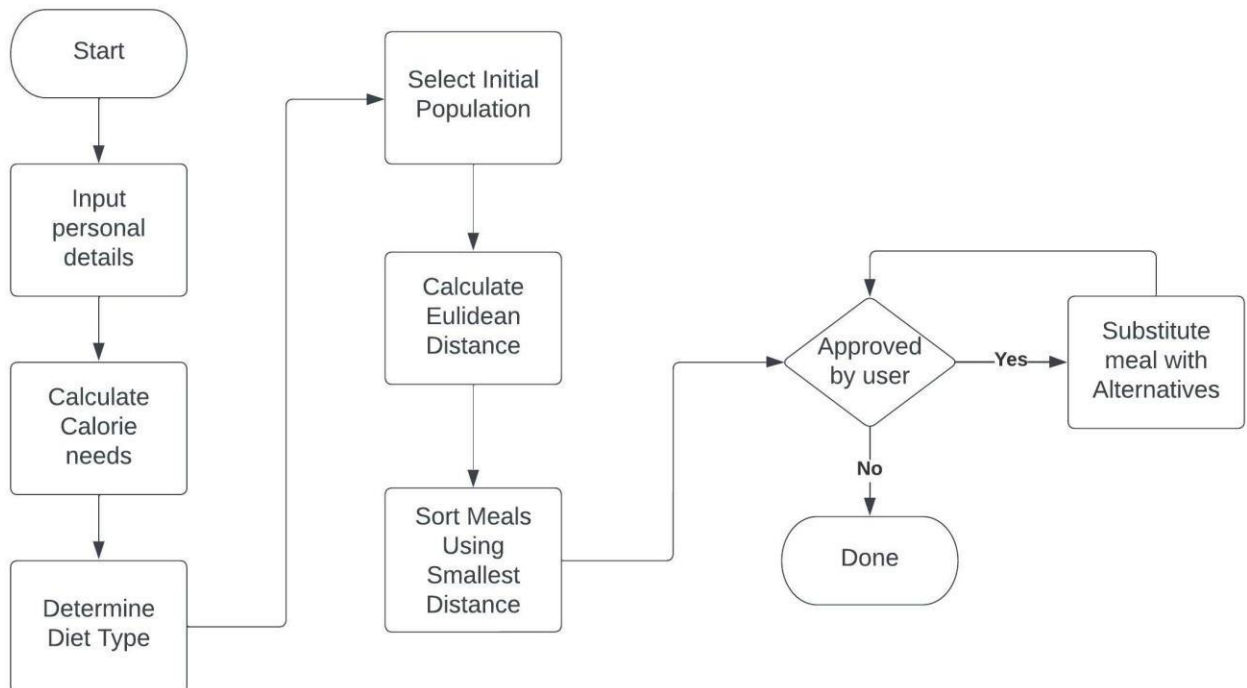

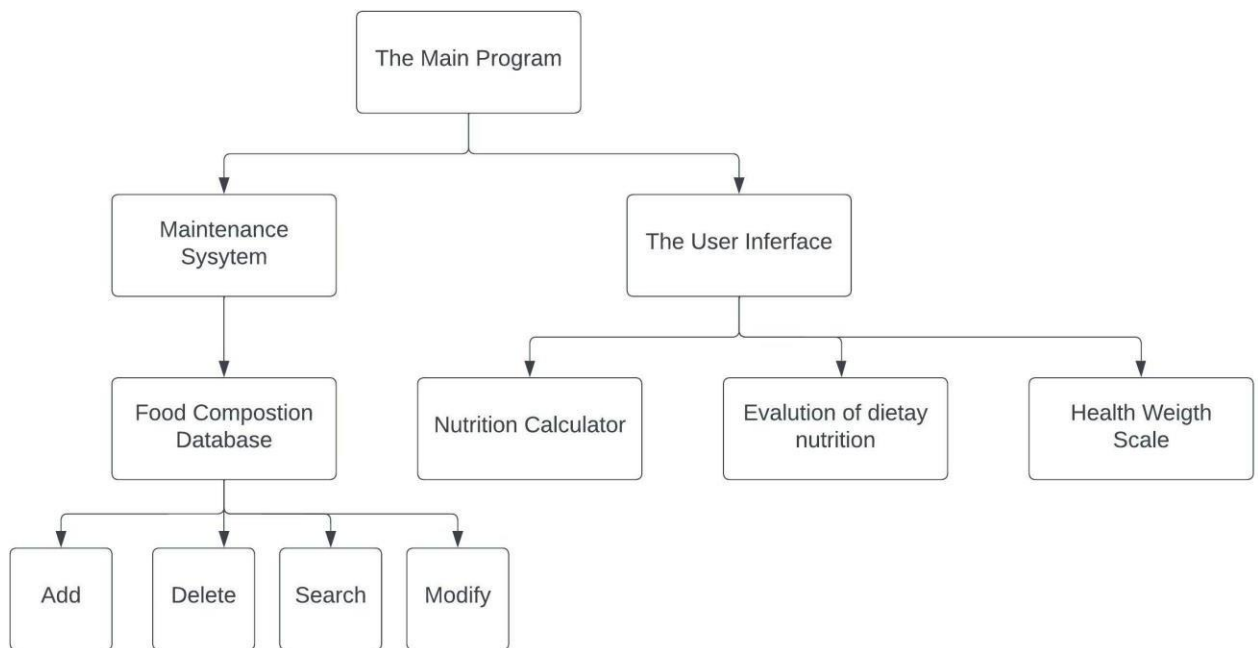

4.2 Non-Functional Requirements

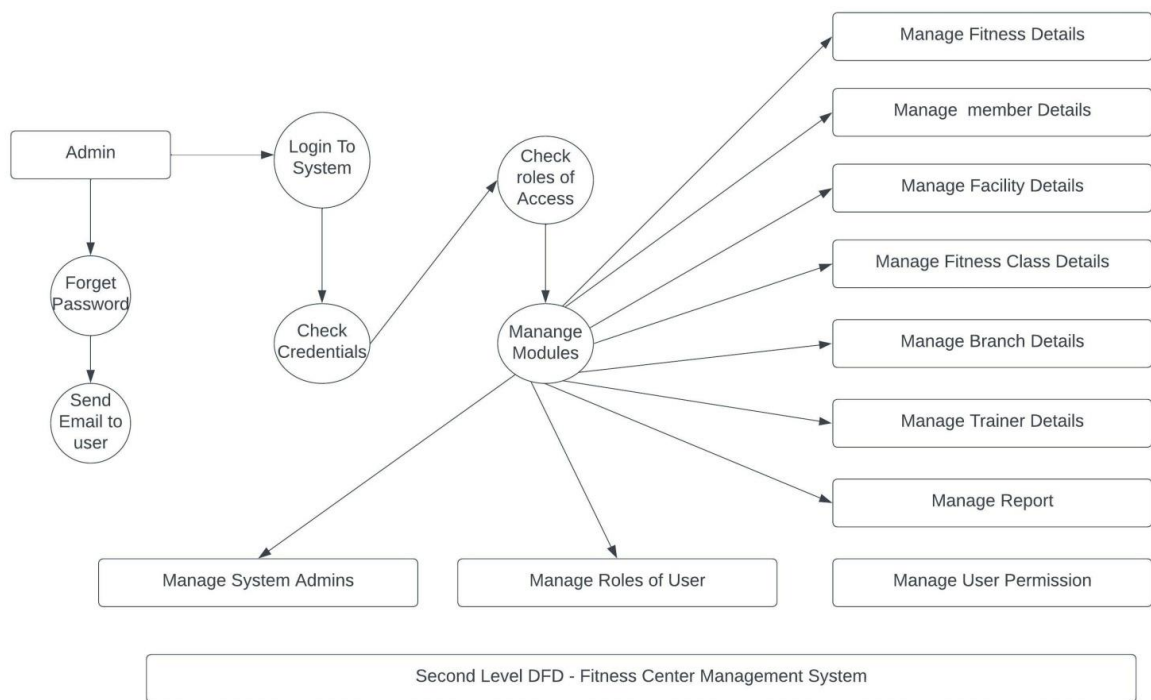

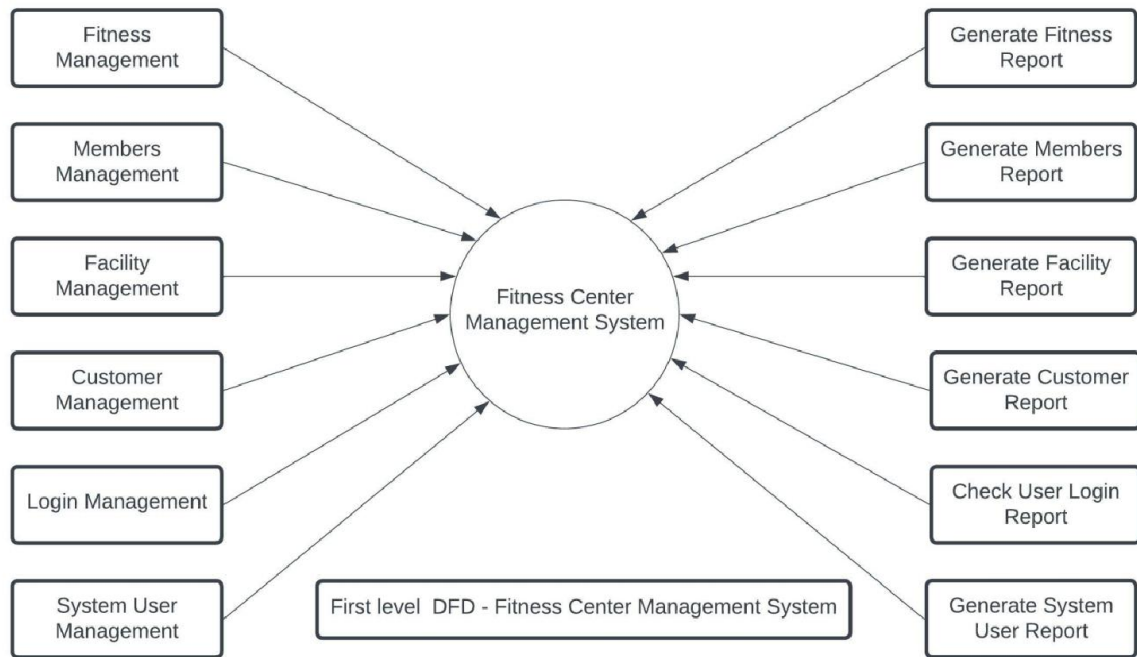

Following are the non-functional requirements of the proposed solution.

FR.NO.	Non-Functional Requirement	Description
NFR-1	Usability	To maintain your health
NFR-2	Security	User details will be secure from server side
NFR-3	Reliability	Trusted details from server
NFR-4	Performance	Better performance comparing to other apps
NFR-5	Availability	Available on email and chatbot
NFR-6	Scalability	Every Customer must get Healthy Life and Proper Diet Maintenance based on the Healthy Measure and Calorie prediction.

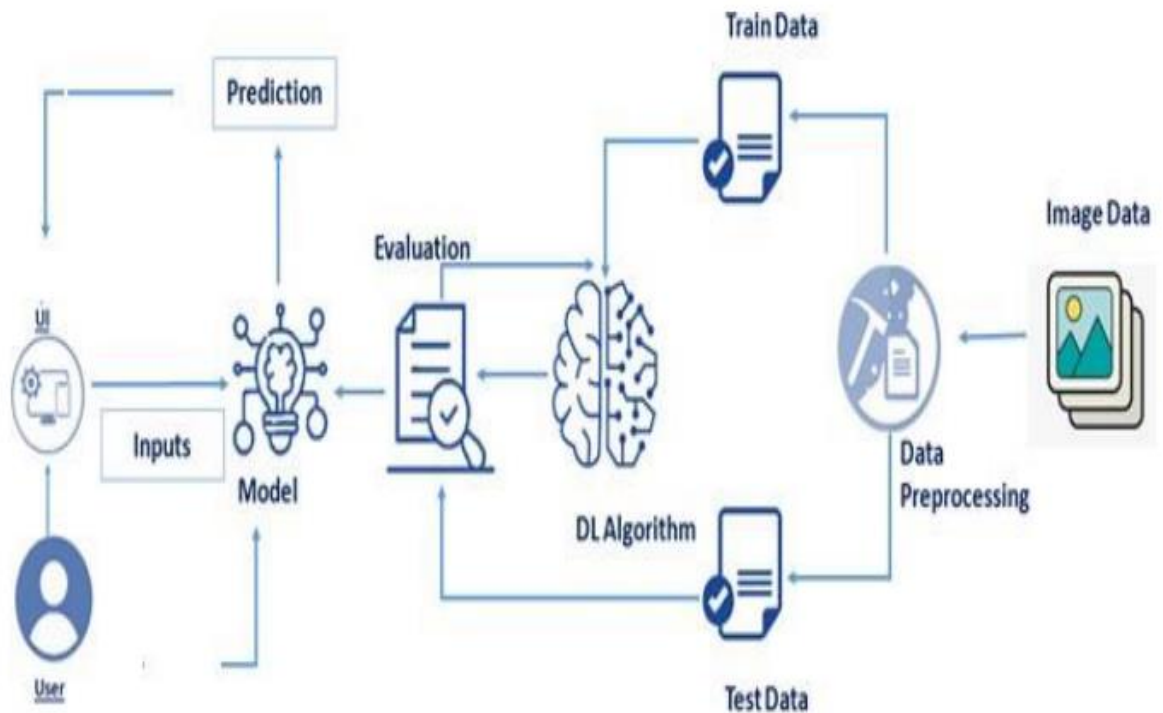

5. PROJECT DESIGN

5.1 Data Flow Diagrams

5.2 Solution & Technical Architecture

6. PROJECT PLANNING & SCEHEDULING

6.1 Sprint Planning & Estimation

Every project manager should consider the delivery strategy of the project deliverables as a strategic component. Every project's objective is to deliver a product that fulfils a certain need. The word "purpose" can be used to refer to a wide range of objectives, including those for a chair, a building, a translation, etc. Delivery planning is one of the activities used in Project Spirit to finish the project and display the projected timeline. This delivery plan aids in comprehending the team members' workflow and project procedure. Each individual module is given to a team member so they can showcase their efforts and contributions to the project's development.

6.2 Sprint Delivery Schedule

The screenshot shows a Google Colab notebook titled 'sprint11.ipynb'. The code is as follows:

```
[ ] ls
Dataset/ drive/ nutrition.hs sample_data/

[ ] model.save('nutrition1.hs')

[ ] ls
Dataset/ drive/ nutrition.hs sample_data/

[ ] pwd
'/content'

[ ] ## Predicting our results
from tensorflow.keras.models import load_model
from keras.preprocessing import image
model = load_model("nutrition1.hs")

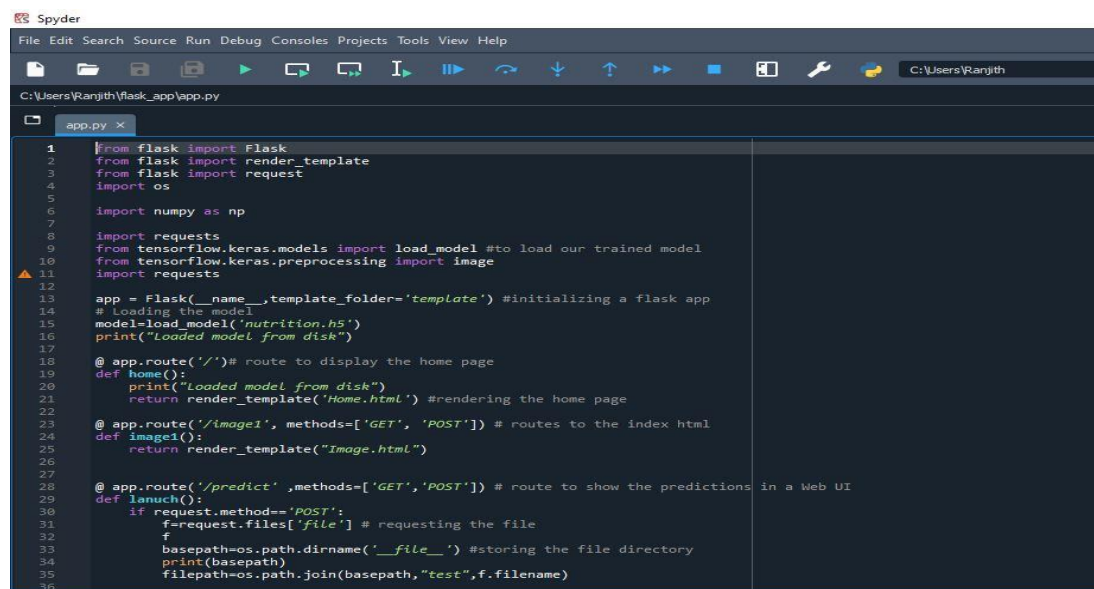

[ ] import numpy as np
from tensorflow.keras.utils import load_img
from tensorflow.keras.utils import img_to_array
img = load_img('/content/Dataset/TEST/257/ORANGE/n07749192_10001.jpg', grayscale=False, target_size=(64,64))
x = img_to_array(img)
x = np.expand_dims(x,axis=0) #changing the shape =
y = np.argmax(model.predict(x),axis=1)
index = ['APPLES', 'BANANA', 'ORANGE', 'PINEAPPLE', 'WATERMELON']
print(index[y[0]])

1/1 [=====] - 0s 25ms/step
ORANGE

[ ]
```

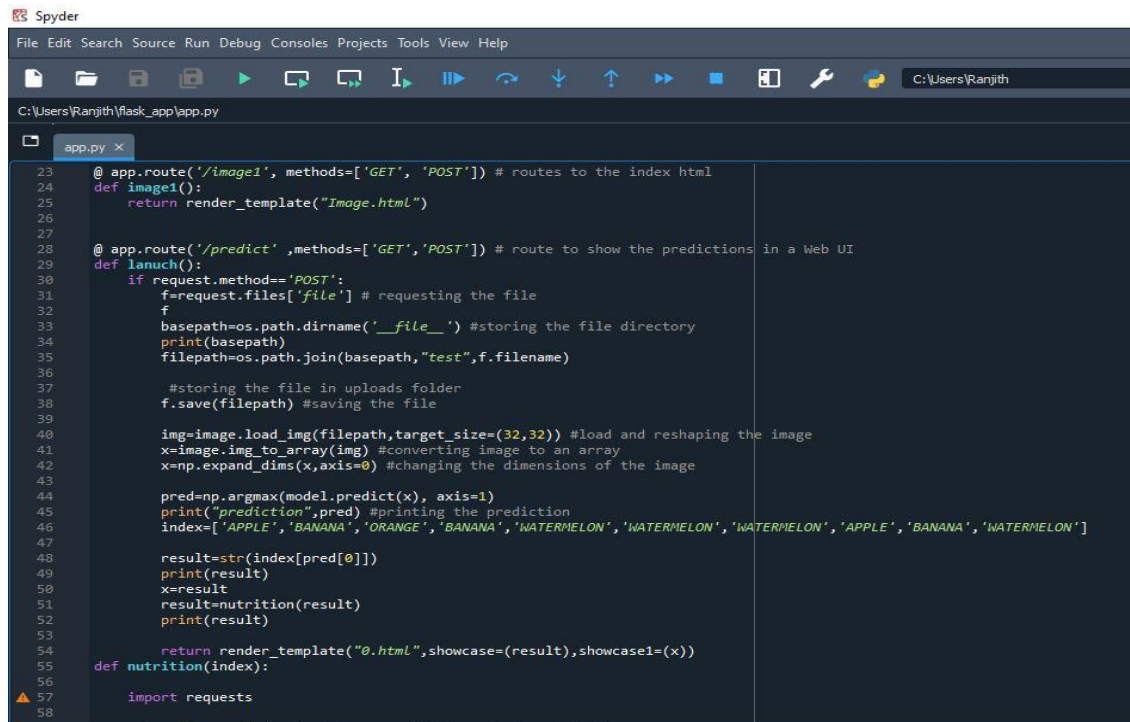

The output shows the model successfully predicting 'ORANGE' from the test image.

7.2 Feature 2

The screenshot shows a Spyder IDE with a Flask application code in 'app.py'. The code is as follows:

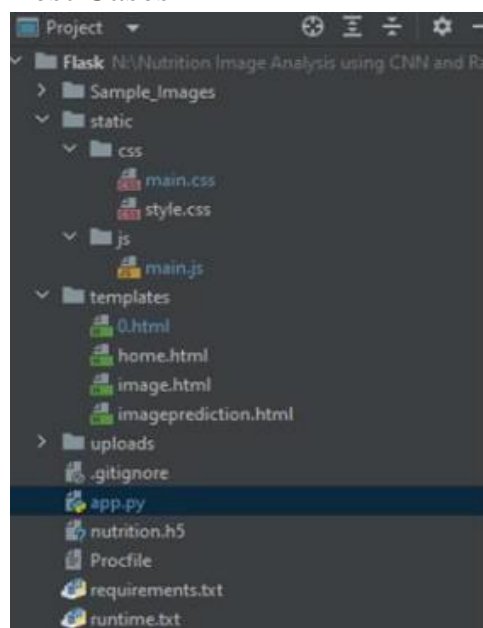

```
1 from flask import Flask
2 from flask import render_template

8. TESTING

8.1 Test Cases

8.2 User Acceptance Testing

9. RESULTS

9.1 Performance Metrics

Nutrition Image Analysis

[Home](#) [Classify](#)

Food is an essential for human life and has been the concern of many healthcare conventions. Nowadays new dietary assessment and nutrition analysis tools enable more opportunities to help people understand their daily eating habits, exploring nutrition patterns and maintain a healthy diet. Nutritional analysis is the process of determining the nutritional content of food. It is a vital part of analytical chemistry that provides information about the chemical composition, processing, quality control and contamination of food. It ensures compliance with trade and food laws.

10. ADVANTAGES & DISADVANTAGES

10.1 ADVANTAGES

- Picture of body identifying benefits of healthy eating for adults.
 - May help you live longer.
 - Keeps skin, teeth, and eyes healthy.
 - Supports muscles
 - Strengthens bones.
 - Lowers risk of heart disease, type 2 diabetes, and some cancers.
 - Supports healthy pregnancies and breastfeeding.

11. CONCLUSION

By the end of this project we will,

- Know fundamental concepts and techniques of Convolutional Neural Network.
- Gain a broad understanding of image data.
- Know how to build a web application using the Flask framework.
- Know how to pre-process data.
- Know how to clean the data using different data pre-processing techniques.

12. FUTURE SCOPE

- AI is revolutionizing the health industry.
- It is majorly used in improving marketing and sales decisions, AI is now also being used to reshape individual habits.
- In future we don't want to go to gym and do any diets. By using this nutrition fitness analyser, we can maintain our diet plans without any help from others and we can lead a happy and healthy life with good wealth.
- AI can easily track health behaviors and repetitive exercise patterns and use the data to guide you towards your fitness journey and diet plans.
